To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. I've done search for pics but I want to see all sorts of bikes just for ideas on stuff without having to go through tons of threads. For all of its early decades the sport of motocross was simply a four stroke sport. Of course that all started to change in 1965 when Suzuki sent two mechanics and a rider to Europe to contest the GPs with both a single and twin cylinder 250 race bike. The idea of a twin was based Joel Roberts success aboard the twin cylinder CZ 360 the year previous. It wasn't until 1967 whe.

Bluetooth is a registered trademark of Bluetooth SIG. Microsoft, Windows and ActiveSync are either registered trademarks or trademarks of Microsoft Corporation. Other product names mentioned in this manual may be trademarks or registered trademarks of their respective companies and are hereby acknowledged. Symbol Technologies, Inc. Chapter 2, Installation and Communication provides information on installing the XR400 and setting it up. Chapter 3, Administrator Console describes how to use the web based Administrator Console to configure and manage the XR400 reader. Chapter 4, Maintenance and Troubleshooting describes how to use the reader maintenance console to perform lowlevel reader maintenance tasks. It also includes troubleshooting tips. Appendix A, Specifications lists the hardware specifications and reader interface details. Appendix B, XR400 Firmware Upgrade Procedure describes how to upgrade the reader with new firmware. Sequential lists e.g., those that describe stepbystep procedures appear as numbered lists.

Before calling, locate the product model number and serial number. Call the Support Center from a phone near the equipment so that the service person can try to talk through the problem. If the

problem cannot be solved over the phone, the equipment may need to be returned for servicing. If that is necessary, specific directions will be provided. Symbol Technologies is not responsible for any damages incurred during shipment if the approved shipping container is not used. Shipping the units improperly can possibly void the warranty. If the Symbol product was purchased from a Symbol Business Partner, contact that Business Partner for service Symbol Support Center For service information, warranty information or technical assistance contact or call the Symbol Support Center listed below. For the latest service information go to United States 1 Symbol Technologies, Inc. This data may be preencoded or can be encoded in the field. Tags come in a variety of shapes and sizes. A reader sends out radio frequency waves using attached antennas. This RF field powers and charges the tags, which are tuned to receive radio waves. The tags use this power to modulate the carrier signal. The reader interprets the modulated signal and converts the data to a format for computer storage. The computer application translates the data into an understandable format. These features can be used to provide real time, endtoend visibility of products and assets in the factory, distribution center, retail outlet, or other facility. Different antennas types can be used to support applications such as dock door area antennas, conveyor. Readers that power and communicate with the tags for data capture and provide host connectivity for data migration. Tags The tags contain embedded chips that store unique information. Available in various shapes and sizes, tags, often called transponders, receive and respond to data requests. Passive Tags are powered by the RF field generated by the RFID reader.

Passive tags are much lighter, less expensive, and have a much longer life than active tags. 14 XR400 RFID Reader Integrator Guide Antennas Antennas are used to transmit and receive radio frequency signals. Antennas do not perform processing. A read point is the RF range of an antenna. Readers Readers communicate with the tags and transfer the data to a host computer. Readers also provide features such as filtering, CRC check and tag writing. The XR400 RFID Reader The Symbol XR400 is an intelligent, multiprotocol UHF RFID reader with RFID read performance that provides realtime, seamless EPCcompliant tags processing. Configuration and Upgrading The XR400 is easily to reconfigure using the Administrator Console. The XR400 can also accept new firmware and configuration under host control. Getting Started 15 Tag Management Ad Hoc Querying Use ad hoc querying to send a query about tag visibility. The XR400 replies with Tags Visible, Not Known never seen or imported, or Not Visible previously seen but now missing, with last seen timestamp. Tag Filtering Use tag filtering to apply filters during read operations. A filter can include or exclude a tag based on the specified bit pattern. Post Processing The XR400 reads all visible tags and applies the filters to the data being sent to the host computer. Tag List Use the tag list feature to send information about tags from the host to the reader. The host can purge the tag list to remove information that is no longer required from the reader. Event Management Event Notification Use event notification to receive notification about certain events. Moderating events smooths out transient RF conditions and insures that a tag has actually moved out of range, rather than just missing a single read. Exception Notification and Heart Beat Notification The XR400 supports sending exception notifications via Simple Network Management Protocol SNMP or XML.

The heart beat notification feature sends periodic messages that indicate whether or not the reader is functional. Device Management Quick Backup and Recovery To back up and restore reader configuration, use a web browser to download the configuration XML file, then download the file to the reader using the Administrator Console. SNMP Integration The XR400 can send real time notification of specific events and failures to the SNMP server. 16 XR400 RFID Reader Integrator Guide Security Trusted Hosts Use the Trusted Hosts security feature to prevent unauthorized network hosts from communicating with the reader. This feature restricts access to the list of allowed host IP addresses. Edit view and edit configuration settings. Maintenance view and edit configuration settings and perform administrative tasks such as updating reader firmware. Use this feature to assign different access levels to users, allowing them to perform necessary tasks without

compromising security. Logging The XR400 keeps a log of all system-related activities for security and troubleshooting. The log, includes timestamped system activities such as good and bad tag reads, login attempts, hardware failures, and other events. Use the log to pinpoint problems, to facilitate quick resolution and to identify administrators who may require additional training to prevent future problems. XR400 LEDs The XR400 LEDs indicate reader status as described in Table 11. Yellow Read Red Error Green Power Figure 13. XR400 LEDs Table 11. LED Indications LED Description Green Reader is powered on Red Error condition or nonoperational mode, e.g., bootup Yellow Successful tag read Getting Started 17 Gen 2 Features The following Gen 2 features have been added. Read Operation The Class1 V2, EPC Tag ID read function is supported. Write Operation The Class1 V2, EPC Tag ID write function has been added.

Kill Operation The Class1 V2 Kill Command implements the Kill command Kill Code Write command and a new Kill Specific command in the Class1 V2 protocol. Lock Operation The Class1 V2 permanent EPC Tag ID is supported. Dense Reader Mode The Class1 V2 Dense Reader mode, allows the reader operate in an environments where multiple readers are simultaneously operating, where few readers are operating or just the one reader is operating. Connection Options The XR400 provides flexibility for connecting to networks via an Ethernet connection. Access each XR400 from anywhere on the network via its unique IP address. The XR400 may be configured to obtain its IP address from a DHCP server, automating the IP address and default Gateway configurations. Flexible Read Point Configurations Connect up to eight antennas four transmit and four receive to a single XR400. This decreases the perreadpoint cost. XR400 Ports The available ports are Table 21. XR400 Port Descriptions Port Description Antenna Reverse TNC Connect up to eight antennas four transmit TX, four receive RX. Insert a crossconnect Ethernet cable for connection to a local computer. USB Client For future expansion. USB Host For future expansion. RS232 Insert an RS232 cable with a DB9 connector for serial console communications to a host. GPIO Insert a DB15 serial cable for connection to external devices. Power Connect the Symbol approved power supply. The DC connector connects to an AC adapter that varies depending on the country. Maximum power consumption 24 VDC, 1.2 A. 24 XR400 RFID Reader Integrator Guide Installing the XR400 The XR400 must be professionally installed. Mount the XR400 in an area free from electromagnetic interference. Sources of interference include generators, pumps, converters, uninterruptible power supplies, AC switching relays, light dimmers, and computer CRT terminals. Mount the XR400 within 15 feet of the antennas. Ensure the power cord can reach the power source outlet.
