Most of us tend to glance through the manual when we first get our spanking new machine and experiment a little with the settings, then end up picking a couple of settings to stick with forevermore. All the different buttons, symbols and timings might seem daunting, but it's worthwhile to know how to make the most out of your washer dryer to save you time, energy, money and also, wouldnt you want to take the best care of your clothes You can also use this function to wash out stains, just be sure to first try removing the stain while it's fresh by dabbing it with a bit of soap water before popping it in the wash. It pretty much guarantees that you'll never have to wash any laundry by hand ever again. To keep things simple, here are 5 easy to remember categories Cottons Standard washing programme for textiles made of cotton or linen EasyCare For textiles made of synthetic materials or blended fabrics Mixed Load For washing natural and synthetic textiles together in a single load HygieneCare Pretreat dry laundry by hot air followed by a low temperature washing cycle to achieve the most hygienic wash results for nondelicate fabrics. Drum Clean To maintain the hygiene of the washer drum and remove residual lint. Materials such as wool or silk may be on the nono list, but its good to check the labels and make a mental note of items that cant go in the dryer. There are two different types of drying programmes Gentle and Intensive so pick the one that suits your needs. Regular cotton items or lighter clothing would be more appropriate for a Gentle Dry, while towels and sheets would be better suited for Intensive Dry. Now that you know all

that your washer dryer can do, I bet you can't wait to try out a new setting with your next load of laundry!<http://ghalemdi.com/userfiles/company-policies-and-procedures-manual-south-africa.xml>

As a general rule of thumb, always follow the temperature and wash programme selection instructions on the care label to keep your clothes in tiptop condition. A dishwasher washes dishes and utensils both quickly and precisely, giving you the luxury of relaxing at home without having to worry about washing up after your meals. Janet 2.0 out of 5 stars It just chugs and chugs and never gets spinning if it doesnt like the weight of the load or cant seem to balance it. Like a set of sheets.or a few pair of jeans. THAT is irritating. I have had loads I try to drain and spin 3 times and it just wont on some loads. It also takes almost an hour or so to do a load.so that is slow. When it works right, I am happy. I paid top dollar for the set and if I had to do it again I wouldnt. When this conks out, I am going back to a top load. They handle more clothes per load and they are so much nicer to work with. TOO Much money for this kind of performance.Please try again later. Please try again later. Donkeys Breath 3.0 out of 5 stars They were out of order for the majority of the time they were in the house, 20 days or so of function and then weeks of waiting for repair man, parts and repair. So we were eventually given new machines!!

I chose BOSCH, a reliable forward thinking brand, Ive had various bosch products before with no issues, ever. Then these beastly machines. We got the washer and the dryer. The dryer is fine, does its think no issues. Ive not seen a top loader for decades before I came out to the usa from the UK, remember the twin tubs, lol. So of course I wasnt going to get an agitator to ruin my clothes. The BoSCH washer has near on caused mental illness via the sheer agonizing, infuriating consistency of its inability to balance and spin. Theres no spin cycle of itself, so you have to go through a slow and harassing process of pushing buttons, waiting, pausing, manually repositioning, wringing out and starting the spin cycle again and again and oh its 23am and I still have laundry to do. I would be better off with my late Grandmothers old twin tub, agitator included. No other front loader Ive ever owned has stunk. If yours does stink I suggest cleaning it. This usually involves the hottest cycle or a clean cycle and a bottle of machine cleaning Clorox. Ive done that twice in 4 years due to the filthy stuff that weve put in there. Clothes are always very clean. We use tide free and clear and occasionally fabric softner, while generally just use dryer balls. I llove the features of the dryer that allow you to flat dry delicates and the air dry only no heat option, as Im happy to leave a dryer on when Im out of the house if theres no heat involved.to avoid a common cause of house fire.Please try again later. Please try again later. Gabriel Stern 1.0 out of 5 stars It has no spinning cycle by itself, so you have to go through the whole rigmarole again, wasting water, energy, and time. The linens and towels dont wash as well as in the old one we had, a GE that we discarded after more than a decade of faithful service. This is an expensive machine, that does not perform well, and HAS NO SPINNING CYCLE by itself, as said.

We have the drier too and again is less effective than the one it replaced. Never again buying this Bosch brand.Please try again later. Please try again later. balomest 2.0 out of 5 stars Had to have repair at year 1 due to a baby sock escaping from the washer bag bag as recommended and it shut down my machine. After 2 service calls its not fixed. Im replacing my washer with a top loader. Nevermind that the machine smells even with the door left wide open after finishing washing all

loads. Towels will never smell good again. I think the smell is the case for all front loaders regardless of brand. But this machine cost a fortune and Im replacing in a little over 2 years. Bosch wasnt helpful at all and in fact service calls took a while to book, and now I know why. I havent had any problems with my dryer so far knock on wood. I have a Bosch dishwasher and so far its okay too. However, Ill never buy another Bosch product. Please try again later. Please try again later. JWR 2.0 out of 5 stars Please try again later. Please try again later. Nataliya I. 2.0 out of 5 stars This machine is a piece of junk. If you need a washer for panties and tees, buy it. Youll be fine. However, if you are planning to wash something heavier than that, skip it. It just wont drain! Please try again later. Please try again later. Mathew C. 1.0 out of 5 stars Washer still functioning after 5 yrs. No one in my area services Bosch. store I bought it from moved. Will be replacing dryer with a Whirlpool. Please try again later. Please try again later. Please try again later. Please try again later. Max K. 2.0 out of 5 stars Spins loudly and now will randomly trip the circuit breaker. I suppose 7 years is about as long as stuff lasts anymore. Please try again later. Please try again later. Willy Rox 1.0 out of 5 stars Im sure I save alot of detergent, water, energy, but spent the savings on repairs. If you dont mind your towels coming out like cardboard, and smelly, this IS the perfect set for you.

Also, my dryer broke dpwn, just replaced the motor, and the door sensor went. So now Im replacing the dryer with a Maytag one. I had a Maytag stackable for 18 years, with very little problems. Shoulda stuck with that. The Maytag repair man is lonely, and I hope to keep it that way. Definitely recommend this. Please try again later. Please try again later. Laundry day is easy and painless with washers and dryers from The Home Depot. If you know what Clothes Dryer Replacement Parts you need, here is where to get them at a GREAT PRICE and most have FREE shipping. Here is how much lint that can. Reload to refresh your session. Reload to refresh your session. Send a Houzz Gift Card. Mine keeps doing this and I keep checking to see if the filter is full but it is not. I am tending to think this normal when the load is complete. I am correct or do I now have a bad dryer. Have you cleaned the exhaust line lately I think the filter light is a reminder to check the filter and clean it when you empty the dryer, and not an indication there is a problem. BTW, I have noticed much LESS lint in this dryer than in my previous maytag. So I doubt it is clogged. Like plumby22 mentioned I dont have the lint build up like I use to have from my prior machines Kenmore TL, whirlpool calypso, and event the FL samsung. I did read in one of

these posting that someone went with time dry and that avoided the wrinkle block mode. My son will start the dryer since he can hear the washer running. This system seems to be working really well and I am not doing laundry all weekend long. The flapper at the end of the run is lifting open fine. Equally annoying is that the cycle time resets when one opens the door to clean the filter of nearly no lint; so i lose my countdown. Pull it up and put it back down to reset the light. The lint filter light is just a reminder light to check the filter and is not hooked up to any error or fault codes. It will flash any time the door is opened or at the end of any cycle. There is no reset to the light, just start the dryer. As to the filter itself it is a microfine filter. The problem is it works almost too well and clogs with fabric softener. It is easy to clean and i tell my customers to wash it with soap and water then rinse well every few months. This keeps it working the way it should.

I REALLY want to find a way to disable that, especially when I turn the dryer on prior to going to bed. The lint filter was fine. After another day of not using dryer sheets, I went into the attic to check the vent. Sure enough, the mesh screen was clogged up. I removed the screen to prevent further issues. Interesting that the dryer is this sensitive and smart to tell me the vent was clogged. Its actually impressive. I keep changing the filter, but it is driving me CRAZY!!! Help! Ours was do a search and youll see my post of TONS of lint taken out. Ours works great now, but our clothes are wrinkled as heck on most settings. I cant figure a way to get the clothes to not wrinkle so badly. We had to have a professional come out to clean our ducts and vent. Try reducing the spin speed to see if that helps or using the Perm press cycle for everything except towels or denim When the washer spins at high speed its not only extracting most of the water but its also pressing the clothes and kind of ironing the wrinkles into the fabric. Also shake out the clothes before throwing them into the dryer. Only if the E01 code comes up does it mean there is something wrong. Like most automatic dryers the moisture sensor doesnt work well. Need to put it on time drying which is the settings on the bottom part of the dial high, med, air fluff and just dry by time. Link to the Nexxt 800 series manual is [The lint screen is clean and there is no blockage on the venting. Anyway I can trick it to not happen. Bosch has come out several times and they cant solve it. The elements 3 have fins on them to transfer the heat to the air and were clogged with lint. This caused low air flow into the dryer as well as causing the elements to not heat as long because the lack air flow was not removing the heat from them so the sensor would shut them down to prevent them from overheating. Works good now dries well.](http://www.kaplanpm.com/wp-content/plugins/formcraft/file-upload/server/content/files/1626c4481e3ef8---campbell-lather-king-manual.pdf)

Her machine was made in 2005 and the lint screen, the plastic slotted unit in front of the lint filter was the problem. I tried a shop vac to vacuum it but the problem was still there. Get a pistol cleaning kit for a 22 cal gun. Pull the lint off the rod when done and take a flame to burn the rest off as the rod is a brass brush with small wires on it. After the lint filter is clean. Open the door, reach your hand in, and spin that thing around twice. You hear a slight click sound, and BOOB your in business. The buzzing sound occurs as the drain pump tries to run but something is blocking it and the "buzzing" noise occurs. As a blocked pump is the most probable cause for a buzzing washer, there can also be a other problems that can cause this noise. We will list the most common reasons for this problem beginning with the most probable first. If your washing machine is NOT buzzing but instead your washer is not spinning or draining during the cycle, then a different troubleshooting method is needed. There can be items such as a small sock, a coin, a toothpick, or something small in your clothes pockets when you wash them. These items can fall out of the pockets and end up in the drain pump causing it to become blocked and make the buzzing noise you hear. Here is an audio recording

of a blocked drain pump. Unfortunately, the only way to fix this problem is to take the washing machine apart and open up the pump and remove the object causing the buzz sound. To find directions to take your specific washing machine apart, do a Google search for Make and Model of your washer. This will also cause a buzzing noise which can also be described as a vibrating noise. To fix this issue you will need to take the washer apart. Here is a video to show you what to look for if your washer motor coupler is broken. Once you know that the motor coupling is broken and needs replaced, we recommend ordering the part online. Simply do a search for "washing machine model motor coupler" and you will find the part needed for your specific washing machine. The part will need to be replaced to fix this problem. Here is an audio clip of a worn washer drive block to help you to diagnose that this is your actual issue. To further assist you with this issue, here is a video to show you how to replace a washer drive block. These small plastic parts are used to turn the top of the agitator in one direction. This pushes the clothes down to the bottom part of the agitator to be washed.

Here is what your washing machine will sound like when the agitator dog ears are worn. Here is a video to show you how to remove and replace washing machine agitator dogs. The way to tell a bad motor is a distinct burning smell. This usually means your washing machine is old and the motor has died from old age. The lights don't come on and the water does not flow through the solenoid valves. I replaced the valve set but no improvement. I removed the exit hose from the pump, removed the footvalve and rotated the pump with my finger. It does not appear to be obstructed. I need advice on the next step.

The tub springs are weak and the washer has run out of balance recently. I was waiting for tub springs to arrive when this humming problem came about. It was loud at first then I was able to do three loads with no problem it was still buzzing but not as loud. I did a separate load with only 2 cups of vinegar and now it stop buzzing. Could that have fixed it If I allow it to continue to hum the washer will shut down completely after a few minutes. I'm guessing that this a safety function to prevent further damage. If, while the washer is still humming, I shut the machine down manually, I can turn the dial to spin, it will spin and drain like it should. I'm thinking it is the motor Your thoughts. Other wise all works perfectly. Happy Holidays too ! Ive encountered this before. Last time "start capacitor" failed. I had it tested. It was registering 366mf. Technician said it was good and strong. I replaced the connections to the capacitor as everything was rusty. So removed pump and spun motor by hand. It works! It agitates.
