

BMW-Motorrad

11 00 040 Testing compression with BMW Motorrad diagnostic system  
+ 11 00 567

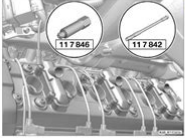

**Preparatory work**  
Remove the front seat  
Removing left bottom side panel  
Removing left radiator cowf  
Removing radiator hose cover  
Removing left side panel  
Removing right bottom side panel  
Removing right radiator cowf  
Remove the right side panel  
Draining cooling system  
Removing complete radiator  
Removing air guide  
Disconnecting distributor rail for secondary air system  
Removing direct ignition coils  
Removing spark plugs  
Connecting BMW Motorrad diagnostic system to motorcycle

**Core activity**  
(-) Testing compression

**Test**  
• Install diagnosis adapter (No. 11 7 846) with hose (No. 11 7 842).  
• Connect the MBOX and follow the instructions.  
• Test the compression with the MBOX.

Technical data		
Compression test pressure	Good	>14 bar
	Normal	12...14 bar
	Poor	<11 bar

Result: Compression loss greater than normal.

## Book Descriptions:

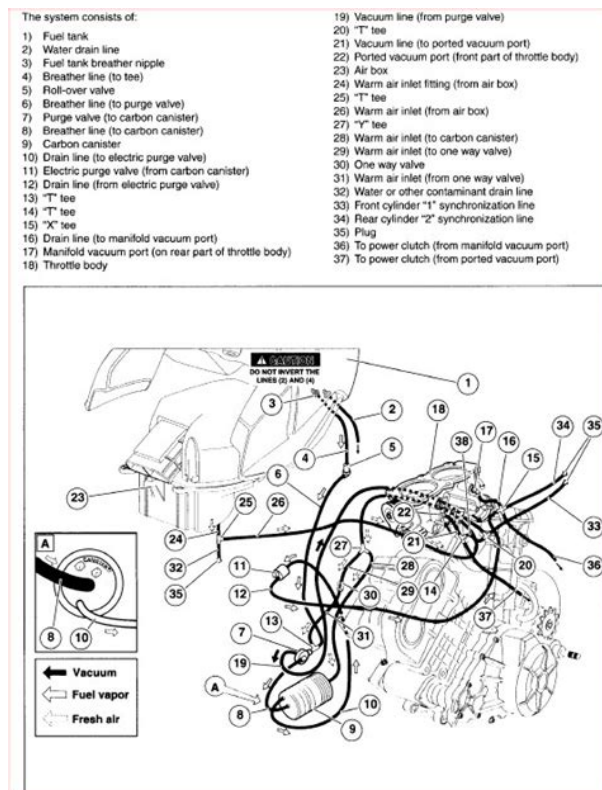

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with caponord service manual pdf . To get started finding caponord service manual pdf , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

## Book Descriptions:

# caponord service manual pdf

Im telling you what. I did to my bike, youre telling me what you did to yours. If you mess up yourself Of course, Aprilia. This manual is intended to aprilia Dealers and their qualified mechanics; several concepts have been deliberately omitted as they are considered unnecessary. As it is not possible to include complete mechanical notions in this manual, users should have basic mechanical knowledge or minimum knowledge about the procedures involved when repairing scooters. Never run the engine in an enclosed area. If you do work in an enclosed area, make sure to use a fume extraction system.

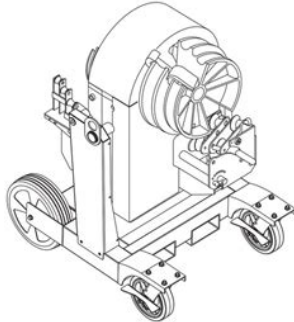

Description	Type	Quantity	Torque	Notes

59 lbf ft crankcase half Fastening oil filter union on clutch 20 Nm 14.75 lbf ft Description Type Quantity Torque Notes Gear retainer pawl fastener screw 12 Nm 8.85 lbf ft Loctite dry loc 2040 Selector plate fastener screw 5.50 Nm 4.06 lbf ft 3M SCOTCH GRIP 2353 Screw fastening Desmodromic se 20 Nm 14.75 lbf ft Description Type Quantity Torque Notes Clutch spring fastener screw 11 Nm 8.11 lbf ft ATER PUMP pos. Description Type Quantity Torque Notes Clutch side cover fastener screw 13 Nm 9.59 lbf ft CHAR 46. Description Type Quantity Torque Notes Bearing retainer fastener screw 10 Nm 7.38 lbf ft Loctite 270 Piston oil jet fastener screw 5.50 Nm 4.06 lbf ft Loctite 270 Tapered plug for crankshaft main M8x1 15 Nm 11.06 lbf ft The class is indicated on both crankcase halves, specifically, in the rear cylinder area on flywheel side crankcase halves and in the front cylinder area on clutch side crankcase halves. There are four different classes of crankshaft available E1, E2,.. selectable in relation to connecting rod weight. To this end, Aprilia offers a set of checks and maintenance services at the owners expense, that are summarised in the table shown on the following page. Any minor faults must be reported without delay to an Authorised Aprilia Dealer or SubDealer without waiting until the next scheduled service to solve it. Description Type Quantity Torque Notes Coil fixing screw 5.50 Nm 4.06 lbf ft TE screw fastening regulator to M6x30 10 Nm 7.37 lbf ft frame Screw fastening ECU to filter box 3 Nm 2.21 lbf ft Error code B0006 INSIDE ERROR There is a fault in the instrument panel. Troubleshooting Replace the instrument panel. OIL SENSOR Error code B0001 OIL SENSOR FAILURE Oil motor low pressure alarm This alarm occurs when the engine is off and the pressure of the engine oil is low. If during the following OFFON key switching, the fault is not immediately detected, the error is no longer displayed. If shorted to negative no voltage has been detected.

If too low too low a voltage has been detected at PIN 42. The instrument panel does not indicate the presence of this error even in the ATT status. ELECTRICAL ERRORS Speed sensor 5D90 electric malfunction Electrical fault in sensor or cable harness. If they are not, install them. If they are, check the speed sensor retainer. If it is not OK, restore it. If it is, check if the tone wheel has the correct number of teeth or if it is dirty, deformed or wrongly fixed. If there is, PIN 2 of the sensor on the cable harness side, with the sensor disconnected and key set to ON, must have 12V voltage approximately if there is no voltage, check PIN 2 for continuity with the vehicle ground connection if it is grounded, restore the cable harness. If it is not OK, restore it; if it is OK, replace the speed sensor. Engine rpm sensor ENGINE SPEED SENSOR Function It informs crankshaft position and speed to the Marelli control unit. On the shaft covers there are 2 double track potentiometers 4 control tracks by means of which the torque demand is read and checked. Replace the sensor if it is correct. NOTES No error is detected if the sensor does not work correctly or the control unit connector or sensor terminals are rusty then use the diagnostics instrument to check if the

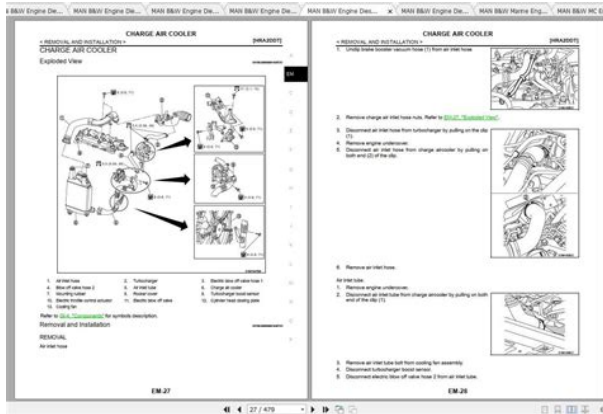

temperature indicated is the same as the engine temperature. If the circuit is open, shorted to negative voltage equal to zero has been detected at PIN 44 of the ENGINE connector. The continuity of the wiring is necessary for correct activation no error indications are displayed in case of lack of activation. If there is no connection, replace the injector. If OK, check cable continuity between the ENGINE PIN 53 and component PIN 2 and restore the cable harness. Check correct operation as follows connect in series a bulb of approximately 2 W it should turn on if the tank is in reserve, otherwise, it remains off. Example value with engine on Indicates the cylinder advance where combustion will take place.

<http://schlammatlas.de/en/node/18707>

If the circuit is open, shorted to negative voltage equal to zero has been detected at PIN 28 of the ENGINE connector. If the circuit is open, shorted to negative voltage equal to zero has been detected at PIN 2 of the ENGINE connector. If shorted to negative no voltage has been detected. If there is continuity, with the throttle body connector connected, check that the resistance, from the throttle control unit connector, between PIN 3 and 15 is within 1 and 2.5 Ohm;. The cause may be a malfunction in one of the two sensors or an ab. The cause may be a malfunction in one of the two sensors or an ab. EVERY 150 KEYONS, HOWEVER, THE THROTTLE VALVES ARE FORCED TO ACTIVATION. If shorted to negative voltage equal to zero has been detected at PIN 72. If shorted to negative no voltage has been detected. If the circuit is open 5V voltage has been detected. The EVC control unit is not able to record the valves travel limits possible interruption of the circuit. If the cable harness is not damaged, replace the component. If the system has already reached the ideal position, it will make no further adjustments. Level in electrical circuit diagram. If all the abovementioned tests have a positive outcome, replace the motor. Connectors EVC EXHAUST VALVE CONTROL UNIT CAPONORD 1200 EVC pin out key A1. CAN L line A3. Power ground connection 2 C7. <http://www.federicocastelnovo.com/images/cape-manual.pdf>

In the event of a bike with ABS system present and indication of the diagnostics instrument of Aprilia Traction Control not present, update the control unit. The error is automatically memorised when the communication between the two control units is restored. Check also the insulation of the two cables between themselves, from supply and ground.

Description	Type	Quantity	Torque	Notes

Clutch side	ATER PUMP pos.			

When removing the entire clutch assembly, removing the clutch side cover is recommended. However, removing the entire clutch assembly is possible by removing the clutch cover alone. If necessary, replace the parts. Checking the clutch hub Check the clutch hub for damage and wear that may result in clutch irregular operation. If necessary, replace the bell. If the projection has changed, rotate the crankshaft to.
